

# SharePoint Server Search Health Reports

## Operations

## Overview

### Target Audience:

*This IP is an advanced reporting tool for SharePoint Server and is targeted at senior IT staff who have designed, deployed, administered and managed a SharePoint Search infrastructure.*

The SharePoint Search Health Reports tool provides detailed dashboard and alerting capabilities for search. Designed to reduce the total operational cost for a search application, this service gives Microsoft Enterprise Search customers insight into their search environments. Customers who install this offering receive alerts for known issues and gain insights into crawl activity and search metrics.

### Benefits:

- ✓ Alert the team of issues before a call about an outage
- ✓ Reduce support escalations
- ✓ Enable search team to focus on providing business solutions instead of just "keeping the environment running"
